

## Light-emitting wallpaper using OLED technology

Sunday, 28 February 2010

Traditionally favored by middle-aged women, wallpaper could cut carbon emissions and eliminate the need for light bulbs.

How? With a UK company, which projects using OLED technology to create light-emitting wallpaper.

A real luxury!

Keep on reading.

The government-backed Carbon Trust has awarded a £454,000 (\$720,000) grant to a company by the name of Lomox, to develop the special wallpaper. Inspired by OLED TVs which use low voltage, Lomox hopes to use some of the same technology for wallpaper that lights up rooms and outdoor areas, believing they can get an affordable product to market by 2012.

Let's just hope they don't stop at Laura Ashley for design influence.
